Purchase superior Indian technology

Mar. 27, 2006. 01:00 AM

High noon for Canada's CANDU

March 25.

It is quite clear that Canadian CANDU reactor technology is expensive, outdated and inadequate for our energy needs. Pouring billions of dollars into this white elephant is a ghastly waste of taxpayer funds. In contrast, India's nuclear technology is much more advanced and efficient.

Recently, India unveiled a revolutionary 600-megawatt thorium reactor which will be the cleanest and safest nuclear reactor in the world. Canada has plentiful thorium reserves and would be much better off purchasing this superior technology rather than continuing to wage a losing struggle propping up the failed CANDU dream.
